

Pictures that will display on ClassPad II must be the Casio c2p format.

You will need the 'Picture Conversion Engine For ClassPad II' software to convert pictures from jpg, jpeg, png, bmp or gif formats to the Casio c2p format.

Contact your local Casio calculator distributor to obtain this software.

Install the software and start.

Drag and drop an image into the conversion engine.

Existing images of width 310 pixels and height 401 pixels seem to fit the conversion engine perfectly.

The software enables cropping, scaling, reflecting and rotating of any image.

After conversion, the new c2p files are automatically saved in the same location as the original image, which is left unchanged by any editing.

Video 991 explains how to transfer ClassPad files from a PC or Mac to a handheld ClassPad.
